

Are there additional mounting brackets for the ADC-VDB775?

Yes. The ADC-VDB775 Wedge Mount Kit (ADC-VDBA-775-WMK) includes three types of wedges: 5° down, 30° left or right, and a 0° spacer.

The additional wedges allow the user to achieve a downward angle for elevated entryways and to capture smaller packages on the ground, more extreme left/right pans for installation on walls perpendicular to the door, or to place the doorbell further from the installation surface so the field of view is not obscured by nearby house trim or angled siding.

For installation instructions using these wedges, see [Alarm.com Premium Video Doorbell Camera \(ADC-VDB775\) - Installation Guide](#).
